

# Snares that live

Our wood-drums—exclusively solid wood—are made with 170 handmade pieces. Because of our special production (barrel-like) and the living raw material „wood“, our instruments have a special sound.

**Specialists, amateurs and professionals will appreciate these snares.**

We have invested countless hours in design and experimentation until the handmade, solid-wood snare conformed to our specifications for sound and design.

We use four different woods for constructing the standard snare drum: (14" x 5,5")

- NUT
- MAPLE
- BIRCH
- CHERRY

The cirde is made of ash-wood and the stack above consists of very hard beech-wood in order to guarantee stability while hitting rim shots. The suspension and the self-developed snare-lifter consist of beech-wood and give the drum an optical touch.

But the most important thing is the sound of the drum, which's already applicated by famous drummers. Even the legendary Peter Erskine, who tested the drum during a workshop in South-Tyrol Italy, has fallen in love with this wood drum, and is now a proud owner of a U—P -snare-drum.
